

ESG Readiness Report

Assessment 16/5/2026 · 17 May 2026
Assessment ID: 6a089bfa551e95f86afe13fd

22	49	11	8
Overall Score	Energy	Water	Waste

1. Organisation Profile

ASSESSMENT NAME	Assessment 16/5/2026
SECTOR	ELEC
BUILDING AREA	—
STATUS	draft
GENERATED	17/5/2026, 4:44:06 pm

2. Data Upload Summary

CATEGORY	MONTHS	SOURCE	UPLOADED AT
Electricity	8	excel	17/5/2026
Water	8	excel	17/5/2026
Fuel	7	excel	17/5/2026
Waste	7	excel	17/5/2026

3. Emissions Summary (tCO2e)

SCOPE 1	SCOPE 2	SCOPE 3	TOTAL
16.03	0	1.75	17.78

4. KPI Benchmarks

ENERGY SCORE	49
WATER SCORE	11
WASTE SCORE	8
GOVERNANCE SCORE	0
OVERALL SCORE	22
READINESS STAGE	Foundational

5. Certification Readiness Matrix

FRAMEWORK	SCORE	TIER	TIMELINE	PREREQUISITES
ISSP_CORE	30.48%	Bronze	12+ months	Met
ISO_14001_EMS	29.31%	Bronze	12+ months	UNMET
ISO_50001_ENMS	41.61%	Bronze	12+ months	UNMET
BRSR_CORE	25.12%	Bronze	12+ months	Met
GRI_STANDARDS	27.56%	Bronze	12+ months	Met
CDP_CLIMATE	47.34%	Silver	12+ months	Met

6. Regulatory Readiness

REGULATION	SCORE	RISK	APPLICABLE	NOTES
GHG Protocol	88%	Low	Yes	Emissions tracking is adequately covered.
ISO 14001 EMS	4%	High	Yes	Severe lack of environmental management governance and track
SEBI BRSR	21%	High	Yes	Missing fundamental disclosures required by SEBI.
EU CSRD	0%	N/A	No	Not applicable for this sector/country.
Singapore GreenMark	0%	N/A	No	Not applicable for this sector/country.

7. Strengths & Gaps

Strengths

- Site energy intensity sits at or below the lower benchmark band — top-quartile operational efficiency.
- Renewable contribution materially exceeds the baseline target — strong decarbonisation signal for certification narratives.
- Measured recycling rate clears the 60% benchmark used for readiness dashboards.
- Derived water intensity is within or better than the reference band relative to floor area.

Gaps

- Overall ESG score is in the foundational band — cross-functional remediation is required before certification submissions.
- No certification pathway currently clears the eligibility score — address prerequisite gaps flagged in the certification matrix.
- Governance score is below the structured threshold — assign ESG ownership, formalise SOPs, and document reviews.
- Composite energy score is materially below peer readiness — revisit intensity, renewables, and monitoring flags.
- Scope 1 (direct) emissions dominate the inventory — prioritise diesel reduction, PNG transition, and DG runtime optimisation.

8. Executive Summary

Based on the operational data provided, the organisation currently scores 22%, placing it in the "Foundational" readiness stage. Key strengths include: Site energy intensity sits at or below the lower benchmark band — top-quartile operational efficiency.; Renewable contribution materially exceeds the baseline target — strong decarbonisation signal for certification narratives.; Measured recycling rate clears the 60% benchmark used for readiness dashboards.. Primary gaps include: Overall ESG score is in the foundational band — cross-functional remediation is required before certification submissions.; No certification pathway currently clears the eligibility score — address prerequisite gaps flagged in the certification matrix.; Governance score is below the structured threshold — assign ESG ownership, formalise SOPs, and document reviews..

DISCLAIMER

This assessment provides an indicative readiness evaluation based on self-reported data. It does not constitute formal certification, regulatory assurance, or legal advice. Results should be independently verified before being used for compliance filings.
